Higher stock levels and new Repair Service announced by Hydro-Lek

Hydro-Lek have announced a significant increase in stock holding of their full range of ROV tooling across the board. This move is in line with their strategy to meet customers' growing requirements for fast and efficient customer service with reduced delivery times.

Higher stock levels have also enabled Hydro-Lek to offer a 2-week turnaround for all tooling repairs. Repairs under warranty are completed within 2 weeks of receipt of product and out of warranty repairs are shipped back within two weeks of customers' approval of repair quotation.

"Operating a fast and efficient Repair Service is important to us as well as our customers," says Graham Hart who heads up the Repair Service. "Customers can now be reassured that products taken out of the field can be replaced in full working order within 10 working days – in some cases even sooner, depending on the complexity."

Hydro-Lek is a leading supplier of remote handling systems for the subsea, nuclear and defence industries. The company was acquired by Saab Seaeye in 2013 and produces a range of hydraulic intervention tooling from simple hydraulic components

to fully integrated telemetry-controlled remote manipulator systems for integration onto ROV's and remote access platforms worldwide.

Ends.
